Allowable Subject Matter

Claims 1-21 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a power line communication system. Each independent claim identifies the uniquely distinct features: "obtaining channel quality data for a PLC system signal path extending between a source PLC transceiver and a destination PLC transceiver; computing, based on at least one of the channel quality data and node configuration data, a payload symbol length; generating a payload portion including at least one payload symbol of the computed length, wherein the length or sum of the lengths of the at least one payload symbol contained in the generated payload portion equals the predetermined length of the payload portion; and modifying processing operations at the source PLC transceiver for generating PLC carriers in accordance with the PLC signal frame structure including the at least one payload symbol having the computed payload length". The cited prior art disclose conventional power line communication fail to anticipate or render the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of Manis et al. (US 2003/0133473), Gardner (US

Art Unit: 2612

6,854,059), and Ide et al. (US 2003/0090368) are cited to show a variety of power line communication systems.
